

Opening a second window to cut and paste:

Sometimes when you are on the Internet it is helpful to have more than one window open, such as when you want to copy & paste links from the web into a site such as Filamentality or TrackStar.

Here's how to do that:

1. Double click on the internet icon to open the **first window**
2. Type in the UIRL for the site you want to start with
3. File, NEW, Window
4. NOW you have **SECOND window** open.
5. Type the first link that you want to paste from in the SECOND window and press enter
6. When the window appears, go to Edit and Copy
7. Now at the bottom of the screen and switch to the FIRST Window's name
8. Go to EDIT and Paste
